

# MATCHLESS ENTERPRISES

## UNIVERSAL BALL JOINT COPULINGS

### 1) INTRODUCTION :

Universal Ball Joint Couplings are used in long shaft drives to take angular misalignment. Simple construction, cost effectiveness and silent working are important features of these couplings due to which they replace conventional Hook Joints.

### 2) SPECIFICATION :

Matchless make Universal Ball Joint Couplings are manufactured in Alloy steel which are properly heat treated for better performance and longer life. These couplings can take maximum angular misalignment of  $45^\circ$ . Universal Ball Joint Couplings can be supplied tailormade (as per customers requirements). The types and sizes mentioned in the table are being supplied most commonly and regularly.

### 3) APPLICATIONS :

- a) *Pump Drives* : Polymer industries, Food processing Industries, Paint manufacturing Industries, etc.
- b) *Multi spindle drives* : Drilling / Tapping heads, SPM
- c) *Steering Drives* : For operating gates / valves.
